

Your Trusted Medical Advisor

COVID-19 VIRTUAL CLINIC SOLUTIONS

VIGILINT's COVID-19 Virtual Clinic is designed to help organizations manage their return-to-work plans through critical containment measures and advanced medical direction from our staff of experienced healthcare professionals.

Each program is coupled with a thorough discovery process and analysis of an organization's reopening plans to determine how VIGILINT can best deliver a customized mitigation solution. COVID-19 medical risk assessment and consultation can be provided by our team of physicians with prior experience in the CDC, US Departments of Homeland Security and Health & Human Services, US Intelligence Community, National Security staff, major US corporations, and in the academia medical field.

COVID-19 VIRTUAL CLINIC SOLUTIONS

Programs are managed by a dedicated team including a Nurse Case Manager, Advanced Practice Clinician, and a board-certified physician as the program's Medical Director. All medical records and test results are maintained in a HIPAA compliant database.

Worksite Screening Program

- Designated/all employees/individuals entering a worksite undergo COVID-19 symptoms and temperature screenings
- On-site screening teams are trained by VIGILINT medical professionals who will also oversee all QA/QI processes for the program
- Positive screenings result in medical consultations, prescriptions for RT-PCR (real-time reverse transcription polymerase chain reaction) self-tests, and recommended treatment for the presumed-infected employee

Confirmed Cases, Return-to-Work Program

- Designated/all employees with presumed or confirmed cases of COVID-19 are evaluated by a VIGILINT medical provider to determine if infection is still active
- Positive evaluations result in medical consultations, prescriptions for RT-PCR self-tests, and recommended treatment for the presumed-infected employee

By-Department On-Site Testing Program

- Named employees or departments are administered a point-of-care test at an on-site location
- Clinical lab technician oversee all on-site protocols and procedures
- Positive test findings result in medical consultations, prescriptions for RT-PCR self-tests, and recommended treatment for the presumed-infected employee

Critical Employee Self-Testing Program

- Identified and screened at-risk employees are shipped a RT-PCR self-test to complete at home, and instructed to send to a designated laboratory for analysis
- Positive test findings will result in medical consultations, prescriptions for further RT-PCR self-tests, and recommended treatment for the presumed-infected employee
