

ADVANCED MEDICAL CARE

At **VIGILINT**, we provide specialized Critical Care Evacuation Teams (CCET) that are designed to deliver advanced medical care during patient evacuation and transport. Our teams are equipped to handle the most complex and life-threatening medical emergencies in dynamic and often hostile environments. Whether operating in austere or tactical settings, our CCET can provide continuous, high-level medical support to patients in transit—ensuring safe, efficient, and life-saving evacuations.

3-PERSON CCET

CONSISTS OF:

- 1 Emergency Physician
- 1 Physician Assistant or Nurse Practitioner
- 1 Critical Care Nurse

The critical care platform can be adapted to work on any mode of transportation and contains the necessary medical equipment and systems to continuously monitor post-surgical patient status and intervene, as necessary, during transport.

BRIDGING MOBILE AND FIXED MEDICAL FACILITIES

Missions may originate from forward locations in austere and semi-permissive environments, picking up patients for transport to higher levels of care that are intra-theater or inter-theater, depending on regional medical capabilities.

AUGMENTING MSRT OR RS TEAMS

CCET is designed to work seamlessly alongside other specialized teams, such as the Mobile Surgical Resuscitation Team (MSRT) or Rescue Specialists (RS). These augmentations provide enhanced operational flexibility and ensure that all aspects of care are covered, from immediate rescue to surgical intervention and patient evacuation.

By augmenting each other's capabilities, these teams work together to provide a comprehensive, coordinated response to any emergency, enhancing the safety and care of the patient during the entire evacuation process.
