

Tactical IFAK

The **VIGILINT** Individual First Aid Kit (IFAK) delivers life-saving supplies needed during the initial phases of Tactical Combat Casualty Care (TCCC). The kit is meticulously designed to compactly fit only those items proven to save lives in the initial minutes after a traumatic event, built on the recommendations from the U.S. Military Joint Trauma System TCCC 2024 guidelines. We source cost-effective items from leading companies, allowing immediate flexibility when guidelines change, and avoiding supply-chain challenges. The IFAK is designed for the TCCC All Service Member level of training and is the foundation on which more advanced levels and kits are based.

OPTION FOR COMBAT WOUND MEDICATION PACK

VIGILINT is the only company currently offering a Combat Wound Medication Pack, which includes TCCC recommended single-dose oral prescription medications designed to improve survival and reduce infection after sustaining combat trauma wounds. We handpick products that ensure each item meets the needs of the end-user. It's the only Individual First Aid Kit on the market that includes a complete pill pack for comprehensive care. Contents Include:

- Moxifloxacin 400mg Tablet (1)
- Acetaminophen 650mg Extended Release (2)
- Meloxicam 15mg Tablet (1)
- Protective pill case
