

MEDICAL PRESENCE ANYWHERE YOU NEED IT

The MSRT is a rapidly deployable 4-5 person team that provides life-saving emergency and surgical care in tactical and austere conditions. Staffed by tactically experienced Surgeons, Anesthesiologists or CRNAs, Emergency Medicine Physicians, Critical Care Nurses and Tactical Paramedics, who are special operations experienced professionals that are comfortable in high-risk, high consequence situations. The MSRT can operate in any temporary structure, on vehicles, watercraft, or aircraft, providing lifesaving interventions even during transit.

DESIGN & COMPOSITION OF THE MOBILE SURGICAL RESUSCITATION TEAM

The MSRT has 2 sub-elements: The Resuscitation Team (RT) and the Surgical Team (ST). The team can be utilized as a 5-person combined team, or separately as a smaller RT and a ST. The design is flexible and any specific composition will depend on mission requirements and must be planned in conjunction with mission leadership.

RESUSCITATION TEAM

Consists of the Emergency Physician and either the Critical Care Nurse (CCRN) or Tactical Paramedic, for a total of 2 personnel.

SURGICAL TEAM

Consists of the Surgeon, Anesthesia Provider, and either the CCRN or Surgical Technician/Tactical Paramedic, for a total of 3 personnel.

LOGISTICS, PACKING, AND EQUIPMENT CONSIDERATIONS

The MSRT can be tailored to meet mission and load restrictions with a base LIGHT, MEDIUM, and HEAVY package. The MSRT is man-portable and easily transferred to mission aircraft, by foot or with a single vehicle for assistance. No other rigging, pallets or special equipment is required. Team equipment includes miniaturized durable medical equipment from military equipment sets as well as best-in-class civilian equipment, all selected to minimize size and weight impacts on the mission while maximizing clinical benefit.
